Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant states that Fulion does not teach an indicator that is physical component of the encoded data file, and which identifies the corresponding video frame of its associated frame region data as well as the location of the frame region within that frame. Examiner disagrees. Examiner states that Fulion expressly teaches that each tile (region of frame) position (indicator) is assigned to its own multicast channel and no word "physical component" is in the claim .
